Active U.S. Secret Clearance | CompTIA Security+ Certified

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience developing industrial control systems, machine-learning data pipelines, and full-stack applications. Proficient in Java, Python, C/C++, SQL, and embedded control environments. Strong background in Cybersecurity, Computer Networking, and Systems Engineering.

EXPERIENCE

Data Annotation | Python, Claude, Docker

Remote

Freelance Software Engineer

June 2026 - Present

- Build data processing workflows used to prepare and validate machine-learning training datasets.
- Review Python code and assess AI model outputs, identifying issues and providing feedback to improve accuracy and reliability.

Life Cycle Engineering | Java (Swing, AssertJ, JUnit), Python, Git, Jira, Agile, SQL, Wireshark, Ada, Modbus, PLC

Philadelphia, PA

Full-Stack Software Engineer

June 2023 - June 2026

- Owned development and maintenance of Java-based Navy ship system components supporting critical vessel operations.
- Led development of Human-Machine Interface features, improving sailor usability and reducing training overhead.
- Owned backend data pipeline architecture across MySQL and SQLite environments, reducing system update latency by 15%.
- Conducted thorough testing of Control System signal communications, ensuring robust functionality and reliability for shipboard controls through usage of Modbus, Ada, and Remote Terminal Units.
- Worked within Agile and Waterfall frameworks, fostering team communication and ensuring timely project delivery for Navy ship class integrators through effective use of Jira and Git.
- Analyzed network traffic data using Wireshark and LUA to diagnose network inefficiencies and improve system performance.
- Maintained PLCs in RSLogix, ensuring accurate information is transmitted in an industrial control infrastructure.
- Authored and managed Systems Engineering Plans (SEP) for NAVSEA programs, distinguishing work products from configuration items to ensure 100% compliance with audit standards.

A.I. Whoo | Python (Pandas, FastAPI), JavaScript (AJAX), Cryptography, Git

Newark, DE

Software Engineer Intern & Team Member

August 2022 - May 2023

- Owned development of QR-code rewards platform for local parks, increasing user engagement and supporting local businesses.
- Developed backend solutions with Python (FastAPI) and JavaScript (AJAX), enhancing server communication efficiency.
- Optimized Teaching Assistant onboarding and payroll, improving team efficiency and reducing administrative tasks.
- Enhanced frontend with data tables and CSV imports through Python (Pandas) and JavaScript, increasing user satisfaction.

PROJECTS

The Sort Fort | sortfort.web.app | [Vue.js](https://vuejs.org), TypeScript

Remote

Programmer

February 2026 - Present

- Built a Vue.js and TypeScript educational platform that visualizes sorting algorithms with runtime and memory analysis.
- Designed interactive animations to demonstrate algorithmic complexity and performance tradeoffs.

Project CSPAN | Unity, C#

Remote

Programmer

April 2025 - Present

- Developing a 2D action-adventure game in Unity/C#, implementing enemy AI behaviors, level design, and gameplay mechanics.

SKILLS

Languages: Java, Python, TypeScript, Vue.js, HTML, CSS, C/C++, C#, Batch, Bash, Apache Velocity, Ada, LUA, SQL

Software: Git, AWS, Claude Code, Docker, Wireshark, VMware, VirtualBox, Visual Studio, Eclipse, Postman, Firebase

Systems: Windows, iOS, Linux (Red Hat, CentOS, Kali, Ubuntu), Programmable Logic Controller (PLC)

EDUCATION

University of Delaware

Newark, DE

Bachelor of Science, Computer Science with Cybersecurity Concentration

May 2023

Minor in Applied Music (Trombone)

Boy Scouts of America Troop 74

Clifton, NJ

Eagle Scout

September 2019
